"STANDARD" ETHYL GAS GENERAL MOTORS PRODUCT

Quicker, Easier Acceleration

Using "Standard" Ethyl Gas, you will find that you can drive in crowded traffic with greater ease and safety! Acceleration is quicker—the motor develops more power. A gallon goes farther and with greater smoothness. "Standard" Ethyl Gas totally eliminates "knocking" and all the waste of fuel and harmful effects of carbon that such knocks indicate.

BOARD and TUITION $400.00.

New dormitory, costing $150,000 recently completed.

Prospectus for 1924-25 on application

WOULD ABANDON STATE CONTROL OF TELEPHONES

Paris Chamber of Commerce Asks Transfer of All Lines To Private Concerns.

The Paris Chamber of Commerce recently passed a resolution urging the French Government to submit to Parliament a bill for the transfer of the government-owned telephone service of France to private companies. This resolution was adopted, says the Electrical Review of London, "as a result of the many complaints * * * received from commercial and industrial concerns in the Paris district with regard to the poor telephone service."

After a full discussion of the subject, the Paris Chamber of Commerce advanced two main reasons for urging the government to abandon public ownership of the telephone system: "First, that the French telephone service contrasts extremely badly with those of other countries, the inferiority being due as much to the defective character of the material and the insufficient number of circuits as to the general poor organization of the service; Second, that the state has failed to take the necessary steps to facilitate and extend the use of the telephone, and the fact that the telephone service results in an annual charge on the French budget is proof that the state is not qualified to carry on the service on a commercial basis."

NO PARTY LINES IN CHINATOWN'S CENTRAL OFFICE

San Francisco's Pagoda-like Exchange Looks Like Tiles From Mah Jongg Set.

The popularity of Mah Jongg has done much to stimulate American interest in all things Chinese. There are few objects, however, even in the Celestial Republic itself, more fascinatingly Oriental than the unique Chinese telephone exchange in our own country which provides telephone service for the Chinatown district of San Francisco.

In outward appearance this telephone building is as typically Chinese as a "one bamboo" tile. Pagoda-like, it lifts its tower, studded with protruding beak-shaped balconies—a fitting monument, it would seem, to some long-dead mandarin of the Forbidden City.

But there is nothing dead inside the exchange, where Chinese girl operators are kept busy handling the traffic, under the general supervision of Mr. Loo Ku Shoo, the manager, who is a graduate of the University of California. These operators are required to be proficient not only in English, but in several different Chinese dialects, for many diverse tongues are spoken among the four hundred million inhabitants of that vast country which stretches from Siberia to India, and from the mountains of Turkestan to the shores of the Yellow Sea.

The Chinese, moreover, are proverbially secretive and have no use for party line telephones, so every subscriber served by San Francisco's pagoda telephone exchange has his own individual line. There are about 1,500 of these lines in service, and the calls average 11,000 daily.

AMPLIFIERS CARRY KING'S VOICE TO 100,000 SUBJECTS

With fanfare of trumpets and all the medieval pomp and circumstance with which Merry England is wont to greet its royal family on state occasions, the British Empire Exhibition was recently opened at Wembley, England, by the king.

An unusual touch of modernity was added to this occasion by the scientific achievement of present-day telephone engineers. His majesty's utterances were heard by a vast audience of more than 100,000 loyal subjects gathered in and about the great concrete stadium by means of the public address system, developed by the engineers of the Bell System, and installed by the Western Electric Company.

A demonstration of the efficiency of the public address apparatus on a large scale was first made in this country when on Inauguration Day, March 4, 1921, President Harding delivered his Inaugural address and was heard clearly by a vast assemblage, estimated at more than 125,000.

DUTY

Twenty years ago the great Baltimore fire occurred. Two thousand five hundred buildings were destroyed, the telephone exchange girls being the last to leave their posts. The girls sat on their stools at the switchboard until the window panes were broken by the heat. Then they, pulled the covers over the board and walked out. Two hours later the building was in ashes.

The telephone system of France, which is owned and operated by the government, has only 1,494,611 miles of telephone wire, as compared with 34,000,000 miles of telephone wire in the United States.

Yeast is Salvation of Growing Chicks, Poultrymen Claim

"The baby chicks may be smart little fellows from strong parent stock," reads a government bulletin on poultry raising, "and they may have been brooded carefully for the first two or three weeks, but unless they receive proper care and management during their later growing period they will not develop properly, and many of them will be lost by sickness or disease."

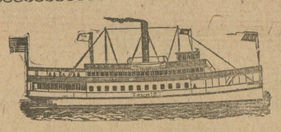

Realization of this fact has led to recent widespread experimentation in the feeding of growing chicks. With the aim of "uniform, continuous growth from hatching time to maturity," as a popular authority puts it, investigators have successfully worked out very effective feeding programs.

In these new formulas, yeast, a relatively new element in poultry rations has an important place. And the benefits achieved by adding it to the feed for baby chicks have been so remarkable that many poultrymen think it will soon become a regular part of chick mashes wherever careful feeding is carried on.

And yet, they say, there is nothing mysterious about yeast - feeding. There are definite reasons for its amazing effect on growth and health.

First, it supplies, in the most highly concentrated form in all nature, the essential B-Vitamin, the vitamin of growth. Second, it acts on the other food in a way similar to digestion itself, making it easier for the chick to turn its food quickly into energy and flesh and sturdy bone.

There is small wonder, then, that poultrymen who have tried yeast-feeding are so enthusiastic about it. It has solved for them their only real problem. Housing and care are influences on the baby chicks' development which they have always been able to control. But proper feeding, they say, was an insoluable question until they began to add yeast to the feed.

STEAMER WILLOUGHBY

Daily Service Between Rock Hall and Baltimore--5 Hours in City.

The Mark of Quality

Firestone

LEADERSHIP

Firestone Leads on Speedway with Five Record Breakers

When the race driver selects his tires he does so realizing that his life and chances for success depend upon them. It is significant that all of the ten money winners in the Indianapolis race were Firestone shod. Firestone, using gum-dipping and other special processes, has developed tires to such a high degree of efficiency that at Indianapolis, May 30th, the following drivers broke the world's record for 500 miles over this brick track, making many rounds at over 100 miles per hour.

Never before were tires put to such gruelling service, where it was necessary for every ounce of rubber and every fibre of fabric to work in perfect unison with every other part.

Driver	Time	Miles per hour
Joe Boyer—L. L. Corum	5:05:23:51	98.24
Earl Cooper	5:06:47:18	97.99
Jimmy Murphy	5:08:25:39	97.27
Harry Hartz	5:10:44:29	96.55
Bennett Hill	5:11:07:00	96.46

Leadership in Everyday Service

Millions of motorists are profiting by the lengthened service of Firestone tires. Scores of unsolicited testimonials emphasize the long mileage Firestone Gum-Dipped Cords deliver—which builds leadership in service, safety and economy.

Leadership on Cabs, Buses and Trucks

The largest taxicab companies in the five largest cities in the United States use Firestone Gum-Dipped Cords exclusively. One fleet alone, the Yellow Cab Co. of Chicago, uses over one-half million tire miles per day.

Firestone for years has been first to develop tires and rims complete which would meet the heavy trucking loads, great strains and demand for traction. By originating and carrying forward the Ship by Truck movement, and establishing Ship by Truck bureaus in all large cities, Firestone helped to speed up highway transportation and reduce costs.

Balloon Tire Leadership

Firestone's latest contribution to motoring is the low air pressure or Balloon Tire. This, the original full-size balloon, was made practical by the special Firestone Gum-Dipping process, insulating every fibre of each cord, adding great strength and stamina. Firestone has also simplified the application of full-size Balloon tires to your present car by designing a special unit consisting of tires, tubes, rims and spokes applied by any dealer at a very low cost.

Leadership Against British Rubber Restriction Act

Attacking the unsound and uneconomic character of the British Rubber Restriction Act limiting the exportation of rubber from the Far East, Firestone was the one large tire manufacturer to take up the cause for the car owner. Soon after the agitation was started for America to produce rubber under its own control, the cost of crude rubber was reduced and tire prices brought back to normal.

Dealer Leadership Through Tire Quality and Service

Through Firestone dealers you can obtain organized service and the soundest values on the market, whether you need a Ford 30 x 3½ Fabric, a set of full-size Balloon Gum-Dipped Cords or a 10-inch truck tire.
