Mrs. Millard Slaughter returned last Sunday to her home in Elkton, after spending two weeks with her mother, Mrs. Kate Garton.

Mrs. Adolphus Davis is the guest of friends in Philadelphia, Ardmare and Chester, Pa.

THE WORLD'S FAVORITE SMOKE-WORDS "HAVE A CAMEL"

Did you ever notice that experienced smokers will offer or ask for a Camel—not just a cigarette? A little observation will reveal the overwhelming preference for Camels—a popularity that has never been equaled in all the history of smoking.

More smokers demand Camels, because Camel is unlike any other cigarette made.

Camel is as different as the rare quality of goodness. This difference costs millions to maintain. The choicest Turkish and Domestic tobaccos grown . . . the most skilful blending—that is Camels. More cannot be had at any price. When you light a Camel, you may be sure you are smoking the best.

When invited to have the world's favorite cigarette, accept with pleasure. It will be your personal introduction to the mildest, mellowest blend of choice tobaccos ever produced. *"Have a Camel!"*

Striking Proof Of Advances In Telephone Art

Telephones At Two Philadelphia Expositions, Fifty Years Apart, Contrasted

At the Centennial Exposition in Philadelphia in 1876, one of the most interesting and undoubtedly the most valuable exhibit was the newly invented telephone which was being displayed to the public for the first time by Alexander Graham Bell. At the Centennial, however, the telephone was only an exhibit—nothing more.

At the Sesqui-Centennial now in progress in Philadelphia, the telephone is really the nerve center of the exposition. Every building is making use of its service. The giant stadium, with a seating capacity of 100,000 people, is splendidly equipped with a loud speaker system. Public telephones are to be found everywhere, and the thousands of people attending the exposition accept the telephone service as a matter of course, as a part of the general scheme of things, just as if it had always existed.

What a contrast with conditions fifty years ago, when there were but two telephones in the entire exposition and they were exhibits which attracted attention because of their novelty and called forth many queries and remarks as to the genuineness of the invention. In fact, many people believed it was a hoax and that it was merely a question of time before the secret would become public as to "how the thing was worked." For they believed that it was worked by agencies, human and unseen to the eye.

When the telephone was exhibited at the Centennial Exposition, it first occupied an inconspicuous place in the gallery, but later was removed to a position on the main floor of the Main Building. Illustrative of the great strides which the telephone has made since that time is the fact that at the Sesqui-Centennial celebration the American Telephone and Telegraph Company has a large exhibit, including its own theatre, at which it is showing the advances made in the art of telephony and is featuring a film of talking motion pictures.

More Telephone Wires In Cable

Telephone cable is used more extensively in America than in any other country. More than ninety per cent of the wire now in use in the Bell System is in aerial or underground cable. The longest underground cable in the world extends from Washington, D. C., to Boston—455 miles in

Cableman splicing huge cable containing 2,424 wires.

length. A combined underground and aerial cable, 861 miles long, was placed in service between New York and Chicago during the latter part of 1925.

Today, there is hardly a city or town in the United States served by a telephone system that does not contain cable. In the larger cities, underground conduit containing huge cables honeycomb the streets and furnish unseen but component parts of the telephone system. From the underground terminals, aerial cables extend far out into the suburbs, and on occasion from city-to-city depending on the number of telephone calls between the two.

The present-day cables contain thousands of wires and are scientifically produced in long lengths. Before the cables leaves the factory, it is tested for defects and then is wound on huge reels and shipped to destination, where it is either suspended in the air or placed underground depending on the nature of the territory to be served by the telephone company. The largest cables used today contain 2,424 wires.

This type of telephone plant came into use in 1881 when a conversation was held through one-quarter mile of underground cable. As late as 1888, the standard telephone cable contained only 100 wires and was two and one-half inches in diameter, outside dimensions.

Since that time numerous improvements have been made in the manufacture of telephone cable, both in transmission requirements and in the number of wires it contains.

Mr. and Mrs. N. A. Wallen and son, Carlton, and Mrs. Hanson Horsey and son, Hansen, spent the week-end in Philadelphia and attended the Sesqui-Centenial.

Mr. and Mrs. John H. Tobin are receiving congratulations on the arrival of a fine daughter.

MARINE SPECIMENS

Harry Payne Bingham, a millionaire yachtsman, and deep sea explorer, has just returned from a cruise covering more than 12,000 miles, to the Gulf of California, in search of new and rare specimens of marine life. The trip was made on the Pawnee, a yacht built for Mr. Bingham and equipped with an aquarium to accommodate several hundred marine specimens. The picture shows Mr. Bingham (right) with one of his companions examining a haul of fish in tropic waters.
