ETHYL GASOLINE

for Heavy Duty Service

TRACTOR engines, like airplane and marine motors, operate at a constant heavy load.

There are only so many heat units in a gallon of gasoline.

Ethyl fluid acts as a combustion governor and makes gasoline burn over a greater portion of the working stroke of the motor, thus converting more heat units into power, and wasting less in the exhaust gases and cooling system.

Thus Ethyl Gasoline gives more power and maintains a cooler motor.

More power from the same gasoline charge means greater economy in fuel.

A cooler motor means less oil consumption and longer life.

Fill your tractor or truck. You will notice the difference.

"Toot Your Horn"

Even if you don't think you are setting the world on fire, it is sometimes well for you to fan your own flames a little.—Exchange.

Uncle Eben

"Some games," said Uncle Eben, "dat start by takin' yoh mind off yoh troubles wind up by makin' de troubles wusser dan befo'."—Washington Star.

On the Wrong Place

Maybe what's wrong with this generation is that too many parents' slippers are being worn out on the dancing floors.—Arkansas Gazette.

Jacitation, in Law

Jacitation is false boasting which may injure another. Jacitation of marriage is a false statement by a person that he or she is married to another, whereby a common reputation of their matrimony may be established. A jacitation suit is a legal action to enjoin a person from giving out such a statement.

Oh, We Guess So

One of the problems which we have with us always is the boy problem. Boys are boys, and there always will be boys. Sometimes they appear to be rather annoying, but usually if they are given a chance they will prove that they are worth it.—Silver Lake (Ore.) Leader.

WHEN BETTER AUTOMOBILES ARE BUILT, BUICK WILL BUILD THEM

Everything
a motor car can offer

Beauty Trim, graceful lines; charming proportions; rich Duco colorings; tasteful interiors—all combine to make Buick beautiful.

Comfort Ample wheelbase and cantilever springs; softly cushioned seats, conveniently arranged—Buick builds comfort for driver and passengers into every car.

Performance Buick's powerful six-cylinder Valve-in-Head engine, now *vibrationless beyond belief,* provides a new and higher standard of motor car performance.

Economy Low operating cost; long life; slow depreciation—these are examples of the economy of owning a Buick.

Value Because Buick gives everything a motor car can offer—in greater measure, at moderate cost—Buick is today the greatest value automobile dollars can buy. A-46-13

Make Use of Animal Bone in Various Ways

The Chinese have added to their industries by the use they make of bones, allowing very few, if any, animal bones to go to waste. The largest section of the back leg of the cow is used for making mah-jongg tiles, and Chinese workmen, despite their extensive use of imported material, maintain that the tile from the native bone is superior, lasting longer than that from the imported product. Of the rib bones, only the upper part of the front three pairs from the cow and ox is used in making handles for knives, fans and similar articles. These three pairs are white and clean when properly treated, while the remainder are usually cartilaginous, or defective in grain. The third section of the rear bone in the sheep leg is used to make cigarette holders and pipe stems, and this bone, it is said, is the only one from the sheep which can be used in the manufacture of other things besides fertilizer. Chinese pipes of this sheep bone are extensively used in certain parts of the country.

Vast Supply of Food in Waters of Ocean

Besides the fishes familiar to all, the herring, mackerel, cod, etc., there are others unknown to our menus, which are nevertheless suitable human food, says John T. Nichols, curator of fishes of the American Museum of Natural History, writing for the Forum. Even the predacious shark can be utilized. At present sharks probably take a toll of food from the sea equal or even greater by several times than man. If the sharks were gone, man would have what the sharks now take from him. The usableness of sharks has been demonstrated by recent investigations. Many of them are perfectly good to eat. Their oil has various desirable properties, and excellent leather can be made from their hides. The residue may be ground up and used for fertilizer. This much is certain: when once the necessity arises, the sea can stay man's hunger for a long time.

Too Elaborate

The head of the house had telephoned that he would bring home a guest to luncheon—a guest whom his wife realized he would delight to honor. Preparations were made accordingly.

Unfortunately, six-year-old Gladys came in a trifle late. She swept the table with an all-embracing glance. "Hum!" she muttered audibly, as she climbed into her chair, "is this lunch?"

"Why, of course, it's luncheon, Gladys," said her mother, with a repressive gesture.

But Gladys was not to be stayed. "Well," she replied, "maybe it is; but it looks exactly like Sunday dinner."

Record in Suicides

Edouard Japin, aged ninety-eight, who killed himself by jumping from a top-story window in Brussels, came near to achieving a record among old-age suicides, though it was reported some years ago that a Hungarian farmer had ended his life, following a family quarrel, at the age of one hundred and two. Quite the most remarkable case of the kind, however, was that of Janos Meryessi of Budapest, who threw himself in the Danube because old age prevented him maintaining his parents. He was rescued and his story investigated. Janos was eighty-four, and his father and mother one hundred and ten and one hundred and fifteen respectively.

Bed Made a Hit

A dignified and solemn boy of almost five arrived to visit his grandparents. Kind efforts to make him feel at home were futile. He refused to talk or warm up to his anxious hosts. Even an early supper left him unresponsive.

So he was escorted up to his bedroom by despairing relatives. Here an old-fashioned, elaborately carved child's walnut bed had been set up for him. At sight of it he became vividly excited, broke into a run, clambered in, lay flat on his back, stretched, rolled over, then sat up with a beaming smile of supreme satisfaction and relief, and announced to the breathless relatives, "Yes, it fits!"

Early Fire Fighters

The first record of what might be called a fire department is found in Rome. A disastrous fire occurring in the reign of Augustus called his attention to the benefit of a regular fire brigade, so he organized one consisting of seven companies of a thousand men each. The first real fire engines were used in 1633 at a great fire on London bridge. The first fire hose was invented in 1672. The first steam fire engine was invented by John Braithwaite of London, in 1829. The first city fire department in this country was organized in Boston in 1678, the fire engine being a hand pump bought in England.

He Wanted to Help

A young farmer wanted to sell his farm and was showing it to a prospective buyer. As they went over the house the farmer's little son trailed along at their heels from room to room. He, too, wanted to show the place off to the prospect, and in the bathroom he interrupted his father's eulogy on the plumbing to pipe:

"Look, mister! See them nice big holes? That's rats."

Germans a Walking Nation

More than almost any other nationality, the German people are given to walking. Hundreds of thousands of pedestrians fill the parks and boulevards on pleasant evenings and Sundays, taking their "constitutional." World travelers maintain this is a custom more noticeable in Germany than in any other country.
