HERE THE RECORD OF HOOVER

Who but Hoover left America on attaining his majority and did not return until twenty years later, having spent his life during that time making his fortune, and acquiring his tastes and culture in a foreign land? (Congressional Record, March 13th, 1928.)

Who but Hoover came to America in 1917, upon America's entry into the war, and took charge of America's food supply and administered that office with an eye single to the interest of that country of which he was the adopted son, the British empire, and in entire disregard of and contempt for the American farmer?

Who but Hoover when the price of American wheat was fixed at a minimum of $2.20 per bushel argued that it be placed at $1.50, and when the Wheat Price Commission overruled him, mindful of his master's voice and fearful of his disfavor, insisted that the fact that he did not fix the price be put in the record? (Congressional Record, March 13, 1928, and letters of Woodrow Wilson.)

Who but Hoover as soon as the power was put into his hands contrived, in flagrant conflict with the spirit of the law, to make the minimum price of $2.20 the maximum price by the expedient of requiring every miller and grain dealer to take out a license and by threatening them with the revocation of that license if they paid more than the $2.20, the minimum price fixed by law? (Congressional Record, March 13, 1928.)

Who but Hoover, having his eye to the office of President of the United States, coquetted with the Democratic party in 1920, even allowing his name to go on the ticket in the Michigan primaries and carrying that State 24,040 to Mr. McAdoo's 18,865? (Congressinal Record, March 13th,

Who but Hoover sat for four years in the amazing Cabinet of President Harding and eithe rdid not have the wit to discover or the courage to disclose the treason and rascalities of his associate members?

Who but Hoover reckons prosperity only in terms of stock-market reports and corporation dividends, those being the interests which he has spent his life serving?

Farmers of America, Who But Hoover?

THOMAS LOMAX HUNTER,
King George, Va., Sept. 24, 1928.

EFFECT OF WIND ON COMMON OBJECTS INDEX TO VELOCITY

How hard is the wind blowing? Ask three people their opinions and you are likely to get three different answers. What seems a moderate breeze to one will be a "gale" to another. The Weather Bureau has worked out a scale of wind velocities as measured by scientific instruments and as correlated with the effects observed on various common objects in the outdoors.

The Forest Service of the United States Department of Agriculture has found need for a method of estimating wind velocities. In the forest-fire season, strong winds often mean that larger numbers of men should be called to the fire line. The service has therefore adopted a modification of the scale used by the Weather Bureau.

A light wind, according to this scale is one moving not more than seven miles an hour. Direction of the wind is felt lightly on face; leaves rustle.

A gentle wind has a velocity of from 8 to 12 miles an hour and can be identified by the fact that it keeps leaves and small twigs in constant motion. Such a wind will extend a light flag.

Moderate winds blow from 13 to 18 miles an hour and raise dust and litter; small branches are moved and swayed.

Fresh winds have velocities of from 19 to 24 miles an hour and cause small trees in leaf (hardwoods) to begin to sway. Crested wavelets begin to form on inland waters.

In strong winds large branches or whole trees are in motion; one walking against the wind experiences inconvenience, and wind whistles in telegraph or telephone wires. The velocity ranges from 25 to 38 miles.

A gale, velocity from 39 to 54 miles an hour, breaks twigs of trees, generally impedes progress, and is likely to inflict slight structural damage on buildings.

A whole gale blows from 55 to 75 miles an hour, uproots trees, and does much structural damage to buildings.

Any wind with a velocity of more than 75 miles an hour is classed as a hurricane, and a description of the affects is not considered necessary as an aid to identification.—From Forest Worker, July 28, Forest Service.

Solving One Problem Of The Crowded City.

"I shall be glad to see Hector, your big St. Bernard, again," said the visitor to the suburbs as the flivver rolled along.

"Had to get rid of that dog," said the modern suburbanite crisply.

"Bite somebody?"

"No, but he took up too much space. St. Bernard's almost as big as a calf. Belongs to past age, when people had barnyards and real estate wasn't so valuable. A one-family dog house is economic waste nowadays."

"One-family dog house? You don't mean to say—"

"Surely do. Had dog house remodeled when I got rid of Hector. Found, as I expected, that if I got a compact terrier there'd be a nice apartment for a still smaller dog on the top floor. Got good top-floor tenant for my own house; rent out half of garage; why not make dog house pay its own way?"

"And does it?"

"You bet it does. Let top floor to a Pekingese. Belongs to man down street who hasn't room even for a bird cage."—Ladies' Home Journal.

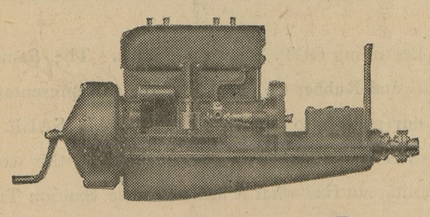

Why not make your "discovery" today?

A new delight!

The world's finest coffees—blended and roasted to perfection—and actually *oven-fresh!* Never before was such coffee goodness available for you. Now the famous Boscul vacuum can lets us offer you Boscul Coffee full strength—full flavor—full aroma. In no other way can you get this. A real discovery to a coffee lover!

WHY DENY YOURSELF THE BEST COFFEE?

Flexibility - Economy - Power

by MIANUS

A generation of boat owners know of MIANUS dependability, but only the owners of the new and improved models in the MIANUS line can appreciate their flexibility, power and economy of operation.

The advanced Line of MIANUS Motors includes models for almost any hull—they range from 3 to 15 H. P. in two cycle and from 5 to 190 H. P. in four cycle. Certain models include the new built-in reduction gear drive—an exclusive MIANUS feature.

All MIANUS Motors are of light but rugged construction and noiseless, clean and free from vibration.

Write for complete information about these remarkable motors.

For Good Telephone Service

"* * * on the management rests an unusual obligation to the public to see to it that the service shall at all times be adequate, dependable and satisfactory to the user—"

WALTER S. GIFFORD,
President of the American Telephone and Telegraph Company (Bell System)

¶ There are two requirements for good telephone service.

¶ First, the organization. An army of men and women, highly trained and efficient, with a high sense of duty and a thorough understanding, not only of their own jobs, but of the relationship of their jobs to those of the others. This teamwork is essential in a service so highly personal in its nature as telephone service.

¶ Second, the plant. Buildings and machinery, poles, conduit, cables, wires, switchboards and instruments—all these go to make up a telephone plant. Much of the equipment used is delicate and intricate. Any faulty adjustment or break, though these do not occur often, may cause annoyance and inconvenience to the user. Thus, constant inspection and testing—continuous watchfulness over every detail of operation is needed to keep the service working at the highest efficiency.

¶ To provide the two essentials for good service—organization and plant—this company spares no effort. We are striving always, not only to improve the technical features of the service, but to encourage a sympathetic understanding between those who use the service and those who furnish it.

¶ Such sympathetic understanding is most important because, from its very nature, the telephone projects the personality of the user and may reflect the irritation of the moment which, in many cases, may have nothing to do with the quality of the service furnished.

¶ While much of the work of giving service must be done by routine methods and mechanical devices, it is our aim in so far as is possible to eliminate all sources of annoyance and to give individual and personal attention to each user. Success in this effort cannot fail to reflect itself in improved service.

THE CHESAPEAKE AND POTOMAC TELEPHONE COMPANY OF BALTIMORE CITY

Phenomenal Sales

prove the public's confidence in BLUE SUNOCO

GAS SUNOCO OILS

Follow the Sun Sign

BLUE SUNOCO is a pure petroleum product, non-poisonous and harmless. Its unexcelled qualities are obtained by careful and scientific methods of manufacture and not by the addition of foreign substances.

Other quality knockless fuels sell from 3 to 5 cents premium . . . You pay no premium for BLUE SUNOCO

BLUE SUNOCO sales are still increasing. Last month broke all records.

These increases are due to just one thing—quality of BLUE SUNOCO.

Never before has a premium motor fuel been offered at regular gas price—a saving of 3 to 5 cents per gallon.

In BLUE SUNOCO, therefore, you have an unexcelled quality at no premium price.

BLUE SUNOCO

never know how well your car can perform with BLUE SUNOCO you've used with it SUNOCO Heavier Bodied MOTOR OIL
