KENNEDYVILLE IN THE LEAD

The absence of Earle Coleman, flinger for Galena, coupled with a hitting spree by the home club, enabled Kennedyville to defeat the visitors, 9 to 2.

With Galena leading, 2 to 1, in the eighth, a high throw by Jones to Newnam allowed Kern, who had walked, to cross the plate and the game was knotted.

Creilly and McDormet singled and scored on Oliff's three-bagger, Coach ran then proceeded to walk three batters and eight runs scored before the pitched was yanked.

ROCK HALL WINS OVER CHURCH HILL, 11-9

A four-run lead, batted out by Rock Hall in the first inning, started the Lower Kent county club to victory over the Church Hill club, of the Chesapeake Bay League, and though the Queen Anne's county outfit pushed over seven tallies in the seventh frame, the league leaders were toppled from their perch, 11 to 9. The game was played at Chestertown on college diamond. There were about 400 present.

MILLINGTON WINS IN THE NINTH

With Millington leading, 6 to 3, in the eighth inning, Cecilton, of the Chesapeake Bay League, pushed three men across the plate in the ninth, but the home club broke the knot in the final frame when Stack walked and tallied on Hurley's double. The score was 7 to 6.

Alderson and Vodvakara engaged in a pitcher's battle.

Hair Shirts

The Catholic Encyclopedia says that a hair shirt was a garment of rough cloth made from goat's hair and worn in the form of a shirt or a girdle around the loins by way of mortification and punishment.

State Game Warden E. Lee LeCompte has issued a warning to all owners of ducking preserves in this county to guard flocks of young ducks now maturing along the water courses against the ravages of bald eagles, crows, and other enemies. The warning has been issued because the State Game Warden has been advised by Canadian authorities and those of Northwestern States where wild ducks breed during the Summer months, that the supply of game this Fall and Winter will be extremely scarce because of a drought in the breeding sections.

WHEAT WORTH 92c TO FARMERS

That the feeding of wheat to pigs is a more profitable method of marketing wheat than selling wheat on the market at the present low price is demonstrated by an experiment carried out by the Delaware Agricultural Experiment Station. With pigs at 8 cents per pound, live weight, the pigs in this experiment returned 92 cents per bushel for the wheat fed. The experiment was conducted over a period of 103 days and involved four lots of ten pigs each. The pigs were fed in dry lot as no forage was available. The average weight of the pigs at the beginning of the experiment was 50 pounds.

Whole wheat and tankage fed to one lot produced an average of 1.14 pounds daily gain and required 464 pounds of total feed to produce 100 pounds of gain. A similar lot of pigs fed shelled corn and tankage averaged 1.04 pounds daily gain and required 427 pounds of total feed to produce 100 pounds gain. In spite of the slightly smaller quantity of feed required to produce 100 pounds of gain with shelled corn, the cost of production pork with whole wheat was less because of the lower market price of wheat as compared with corn.

Whole wheat, supplemented with soybeans as the protein supplement produced slightly lower daily gains than whole wheat and tankage, but the feed required per 100 pounds gain was somewhat less.

Coarsely grinding the wheat did not improve it for swine feeding, according to this experiment. The group of pigs fed ground wheat and tankage made 1.17 pounds daily gain and required 469 pounds of total feed to produce 100 pounds of gain. The increase in daily gains on ground wheat as compared with whole wheat was not great enough to pay for the cost of grinding.

The price of wheat at the present time is between 45 and 50 cents a bushel.

In this experiment where whole wheat and tankage was fed to pigs, it took 7.6 bushels of wheat to produce 100 pounds of gain—7.6 bushels of wheat at 50 cents per bushel would be worth $3.80. With pork at the present price of $8 per 100 pounds live weight, the 7.6 bushels of wheat returned $6.98 after deducting the cost of the tankage used to supplement the whole wheat. This amounts to $3.18 for the 7.6 bushels of wheat in favor of marketing wheat through pigs.

The pigs fed what are said to have remained in a thrifty, healthy condition throughout the experiment. In the experiments at the Delaware Agricultural Experiment Station wheat has produced as desirable a market hog as shelled corn.

New Orleans' Situation

The site of the city of New Orleans is flat with a slight slope away from the river to the swamps behind the city. The highest elevation above the sea is about ten feet and in flood time nearly all of the city is from four to twelve feet below the level of the river, which is kept out by levees or dikes built along the entire front and graded down to the flat city site.

Baby's off to slumberland

One of Mother's most important duties is to see that blankets, nighties, boots, diapers and all the other clothing that touches baby's tender skin are kept not only soft and dainty but unquestionably clean.

Such royal raiment should be laundered at home—in a Maytag! Then Mother can be sure that all the precious little bits of cotton, wool and silk are washed with hand gentleness, hygienically clean.

For baby's sake, and your own PHONE for a trial washing or ironing or both. If the Maytag doesn't sell itself, don't keep it. Divided payments you'll never miss.

Save the Man at the Feed Table

EACH saving that you can make in filling silos adds to your profit. Saving labor saves money.

The usual man at the feed table is not necessary when you fill with a Case. The feeder has smooth, flaring sides to make feeding easy. Heavy steel slats, spaced four inches apart, grip the material and carry it in a steady, continuous flow to the feed rolls.

The large front feed roll automatically stops feeding if the throat should become crowded. This roll also aids in positive feeding of the material to the notched and grooved upper and lower feed rolls which hold it firmly for clean cutting.

You can cut all that two men can pile on. Four knives mounted at the correct angle, cut uniformly all the way across. Four fan blades, one for each knife, lift the silage to the top of the tallest silo.

Let us tell you more about this truly modern money-making silo filler. Get one for this year's work.
