IMPERIAL Double Disc Harrow.

It harrows the ground twice in one operation, saving the labor of a man and two horses. It enables the farmer to do his work in one-half the time, making the most of favorable weather and soil conditions. It gives better results than any other harrow and leaves the ground in better condition.

In construction the Imperial Double Disc consists of a complete out throw harrow with a second harrow (in throw) attached by a flexible frame. The forward harrow cuts the soil and throws it outward; the rear harrow works it again and throws its back, leaving the surface finely divided and perfectly level. The rear gangs follow the front gangs in turning and the dirt is not thrown up in ridges at the corners. Every inch of ground is pulverized and leveled.

The rear gangs may be quickly and easily detached and the machine used as a single disc harrow if desired.
