WE OFFER OUR ASPARAGUS FERTILIZER
WE OFFER OUR OAT FERTILIZER.
WE OFFER OUR GRASS FERTILIZER.
WE OFFER OUR POTATO FERTILIZER.
WE OFFER OUR CORN FERTILIZER.
WE OFFER OUR PEACH TREE GUANO FRUIT GROWER.

These are all right

BUT TOMATOES!

WHY IS IT Peerless outsells all other Tomato goods?
WHY IS IT Peerless sells higher than other brands?
WHY IS IT other fertilizer men say their Tomato Fertilizer is as good as Peerless?

The answer is easy—everybody knows it.

QUALITY

Captain Emory grew on one occasion 17 tons per acre. Mr. Zac T. Gilbert grew 19 tons to the acre. Mr. G. W. Collins has bought as high as 50 tons per year, and his men grew from 12 to 15 tons per acre. We have sold already in Anne Arundel county, the lower counties and New Jersey, hundreds of tons already. Messrs. Baker and Morgan have bought as high as twelve hundred dollars worth; Messrs. Smith, Rouse & Webster have bought in the past as much as several thousand. Captain Dashiel says he would have it if he had to give $50.00 per ton for same. Mr. Joseph Downey says when he was canning that he could actually tell the difference in tomatoes grown with Peerless when brought to his cannery. Mr Numsen says he knows that tomatoes grown with our goods are fine. Mr. Frank Moore who runs Assaw Bains & Co.'s cannery, says the best tomatoes brought there are from Peerless. Mr. Loose, a customer of his, says a ton of Peerless grew him $96.00 worth more tomatoes than another goods costing $7.00 less per ton. Mr. Money says it is certainly good. We could go on, but with a testimonial will close.

Unsolicited, some time ago Mr. W. S. Elburn & Son came into our office and said: "I believe your Peerless to be the best tomato goods I ever saw. You remember what an advocate I was of it when I lived out at the mill. Well, wherever I have lived since, on the Western Shore or elsewhere, I would have it, and last year I put some of this same goods on some onions grown from the seed, and they were as fine as Bermudas. Many measured 4 inches in diameter, and I grew over 600 bushels per acre, or at the rate of 1162 baskets. I used it on strawberries and picked 8000 quarts per acre.

The above testimony should, therefore, be convincing.

Respectfully,

WILBUR W. HUBBARD,

Over-Work Weakens Your Kidneys.

Unhealthy Kidneys Make Impure Blood.

All the blood in your body passes through your kidneys once every three minutes.

The kidneys are your blood purifiers, they filter out the waste or impurities in the blood.

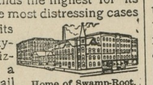

If they are sick or out of order, they fail to do their work.

Pains, aches and rheumatism come from excess of uric acid in the blood, due to neglected kidney trouble.

Kidney trouble causes quick or unsteady heart beats, and makes one feel as though they had heart trouble, because the heart is over-working in pumping thick, kidney-poisoned blood through veins and arteries.

It used to be considered that only urinary troubles were to be traced to the kidneys, but now modern science proves that nearly all constitutional diseases have their beginning in kidney trouble.

If you are sick you can make no mistake by first doctoring your kidneys. The mild and the extraordinary effect of Dr. Kilmer's **Swamp-Root,** the great kidney remedy is soon realized. It stands the highest for its wonderful cures of the most distressing cases and is sold on its merits by all druggists in fifty-cent and one-dollar sizes. You may have a sample bottle by mail free, also pamphlet telling you how to find out if you have kidney or bladder trouble. Mention this paper when writing Dr. Kilmer & Co., Binghamton, N. Y.

Home of Swamp-Root.

Don't make any mistake, but remember the name, Sawmp-Root, Dr. Kilmer's Swamp Root, and the address, Binghampton, N. Y., on every bottle.

A THIMBLE OF GOLD

IT IS MADE OF METAL ALLOYED DOWN TO FOURTEEN CARATS.

The Process of Manufacture, From the Ingots of Pure Gold Fresh From the Subtreasury to the Finished Shining Product.

Out of whatever part of the earth it may originally have been dug, the gold from which thimbles are made in Philadelphia was bought at the United States subtreasury in the city in the form of snug little ingots, brick shaped and about two and a half inches long, an inch and a quarter wide and about an inch thick.

These little ingots would be of a convenient size for paperweights. But they would be rather heavy for such use and probably too expensive for most people, for each one contains, of pure gold, 24 carats fine, metal of the value of about $600.

Gold of this fineness would be much too soft for thimbles, and it is alloyed down to 14 carats, in which condition it is rolled into sheets of suitable thickness. In the first process of manufacture a sheet of this gold is run into a machine which cuts out of it a disk in size sufficient to form a thimble, the same machine stamping this disk also into the form of a straight sided capsule with irregular edges.

Then the thimble blank goes into another machine, in which a die stamps it into its conical shape. Out of this machine it goes into an annealing furnace for tempering and from that into an acid bath for cleaning and the removal of the fire coating.

Then the thimble is put into a lathe to be turned down to its final shape and dimensions. It is dull colored when it goes into the lathe, but at the first touch of the keen edged cutting tool it shows a glistening narrow band of bright gold surface, which is widened in a moment to cover the whole length of the thimble as the skillful worker shifts the tool along.

With repeated application of the tool the operator brings the crown of the thimble into its perfect form and cuts down along the thimble's sides to bring the walls of the thimble to the requisite thickness, and he defines and finishes the smooth band that runs around the lower part of the thimble and brings into relief the rounded rim that encircles the thimble at its opening at once to give it a finishing ornamental grace there and to stiffen it. The glistening little gold shavings that he cuts off in these various operations all fall into a canvas trough suspended between him and the bench upon which stands the lathe.

With that last touch to its rim in this stage of making the former has grown marvelously more thimble-like in appearance, but somehow it still lacks the breath, so to speak, of thimble life; it lacks yet the familiar indentations in its surface that serve to support the needle and to hold it in place. These the thimble maker now proceeds to make, and the making of these is nice work indeed.

It is done with a tool called a knurle. There is an end knurle and a side knurle. An end knurle is simply a handle having set in it a tiny, thin revolving wheel of steel, upon whose periphery is a continuous encircling row of little bosses or knobs corresponding in size to the indentations to be made. The side knurle has in place of such a wheel a little steel cylinder of a length sufficient to cover that section of the thimble that is to be indented on its sides, this cylinder having knobs all over its surface, as the end knurle wheel has around its edges, and turning, like the wheel, on its axis.

The thimble in the lathe is turning with 2,500 revolutions a minute, and it seems as though the application to its surface of any sort of tool with protuberances on it must leave there only a jangled and mixed up lot of irregular marks. But now with the end knurle the thimble maker makes an indentation in the center of the top of the thimble, and then he proceeds rapidly and with perfect certainty with the end knurle to describe around that center concentric rings of indentations, with the indentations all perfectly made and the rings all perfectly spaced, from the center to the circumference of the top.

You may see him do this, but you can't tell how he is able to do it. And then with the side knurle he makes the indentations in the sides of the thimble, making there as well, as he deftly presses the tool against it, indentations that run absolutely uniform and true and that end at their lower edge in a perfectly true encircling line.

It is astonishing and a pleasant thing to see how it develops and comes to itself with the making of these familiar indentations, and now there remains to be done to it only the polishing inside and out and you have the finished gold thimble.—Philadelphia Press.

How Exclamations Originate.

"Halloo" and "hurrah," which are among the exclamations in common use, can be traced to curious origins. The author of "The Queen's English" tells us that the people of Carnwood forest, Leicestershire, when they wish to hail any one at a distance call out not "halloo," but "halloup." This, he takes it, is a survival of the times when one cried to another "A loup! A loup!" or, as we should say, "A wolf! A wolf!" "Hurrah," according to high authority, is derived from the Slavonic "huraj," "to paradise," a battle cry which voiced the prevailing belief that all soldiers who fell in the fight went straight up to paradise.—Pearson's Weekly.

In Bohemia courtships are abnormally long. In that country engagements frequently last from fifteen to twenty years.

An Ideal Heroine

Barbara Winslow, Rebel

By ELIZABETH ELLIS

"There is something exceedingly winsome about Barbara; she is such a merry madcap of a girl, and yet as feminine as one could wish or imagine."
Brooklyn Standard-Union

"Barbara, coquettish and fickle, light-hearted and gay, but daring in the face of danger and true as steel."
N. Y. Mail.

"Barbara is an alluring creature—a girl of brave heart, sweet spirit, high courage, and fascinating moods and qualities."
Chicago Record-Herald.

"Barbara is one of the most winsome of the seventeenth century heroines we have encountered in fiction."
Detroit Free Press.

A girl who masquerades in man's attire, fights a duel with a King's officer, disarming him, and then falls desperately in love with him, is the heroine of this charming tale. Barbara is an entrancing creature, whether in petticoats or doublet and hose. Her acquaintance is well worth making.
