NOTICE TO CREDITORS.

NOTICE IS HEREBY GIVEN that the subscriber has obtained from the Orphans' Court of Kent county letters of administration on the estate in Kent county, Maryland, of

SARAH LOUISA BEEKS,

late of Kent county, Md., deceased.

All persons having claims against said deceased are hereby warned to exhibit the same, with the proper vouchers thereof, to the undersigned on or before the 15th day of November, 1906, otherwise they may be excluded by law from all benefits of said estate. All indebted to said estate are requested to make immediate payment to the subscriber.

Given under my hand this 15th day of May, 1906.

JOHN D. URIE, Executor.

May 19, 1906—4t.

Is Disease a Crime?

Not very long ago, a popular magazine published an editorial article in which the writer asserted, in substance, that all disease should be regarded as criminal. Certain it is, that much of the sickness and suffering of mankind is due to the violation of certain of Nature's laws. But to say that all sickness should be regarded as criminal, must appeal to every reasonable individual as radically wrong.

It would be harsh, unsympathetic, cruel, yes criminal, to condemn the poor, weak, over-worked housewife who sinks under the heavy load of household cares and burdens, and suffers from weaknesses, various displacements of pelvic organs and other derangements peculiar to her sex.

Frequent bearing of children, with its exacting demands upon the system, coupled with the care, worry and labor of rearing a large family, is often the cause of weaknesses, derangements and debility which are aggravated by the many household cares and the hard, and never-ending work which the mother is called upon to perform. Dr. Pierce, the maker of that world-famed remedy for woman's peculiar weaknesses and ills—Dr. Pierce's Favorite Prescription—says that one of the greatest obstacles to the cure of this class of maladies is the fact that the poor, over-worked housewife can not get the needed rest from her many household cares and labor to enable her to secure from the use of his "Prescription" its full benefits. It is a matter of frequent experience, he says, in his extensive practice in these cases, to meet with those in which his treatment fails by reason of the patient's inability to abstain from hard work long enough to be cured. With those suffering from prolapsus, anteversion and retroversion of the uterus or other displacement of the womanly organs, it is very necessary that, in addition to taking his "Favorite Prescription" they abstain from being very much, or for long periods, on their feet. All heavy lifting or straining of any kind should also be avoided. As much out-door air as possible, with moderate, light exercise is also very important. Let the patient observe these rules and the "Favorite Prescription" will do the rest.

Dr. Pierce's Medical Adviser is sent *free* on receipt of stamps to pay expense of mailing *only*. Send to Dr. R. V. Pierce, Buffalo, N. Y., 21 one-cent stamps for paper-covered, or 31 stamps for cloth-bound.

If sick consult the Doctor, free of charge by letter. All such communications are held sacredly confidential.

Dr. Pierce's Pleasant Pellets invigorate and regulate stomach, liver and bowels.

A SHOW OF MATTING

THE TIDY TADPOLE.

How This Cheerful Little Cannibal Eats and Develops.

A wonderful spirit of tidiness seems to pervade the tadpole world. They always eat whatever has become useless—their own eggs, their superfluous companions. Even those who are only weakly are cleared out of the way and the victims take it all as a matter of course. I have disturbed a strong member of the community just as he had begun to dine off the tail of a weaker brother, but the sufferer has not troubled to escape—he simply waited till the fratricide returned to complete his deadly work.

For some time there is no grave change in the tadpoles. They simply grow and become so far transparent that their internal mechanism, which consists of one coil of intestines, is plainly visible. When, however, they are about three months old a careful observer can distinguish a tiny foot on either side of the base of the tail. These grow slowly, but seem unable to move independently until shortly before the border land is passed which leads to perfect froghood. The hind legs have reached their full size before the front ones appear, and, while the feet grow slowly, the hands are ready made and can be used at once. For a day or two they can be seen under the skin before they venture forth, and their possessor is very restless and excited. He rushes madly about, jostling his comrades, and no doubt being voted a bore; then a more vigorous effort breaks the skin and the tiny hand and arm appear.

There seems some rule about the order of precedence here, as there is when the whiskers go, for last year my tadpoles, almost without exception, had their right hands some hours before the left, while on previous occasions I have had an entirely left handed crew.—Chambers' Journal.

MUSIC AT SEA.

Conditions Under Which Ships' Sails Sometimes Sing.

Some curious facts have been noted with regard to the sound conducting qualities of ships' sails. When rendered concave by a gentle breeze, the widespread sails of a ship are said to be excellent conductors of sound.

A ship was once sailing along the coast of Brazil, far out of sight of land. Suddenly several of the crew, while walking along the deck, noticed that when passing and repassing a particular spot they always heard with great distinctness the sound of bells chiming sweet music, as though being rung but a short distance away.

Dumfounded by this phenomenon, they quickly communicated the discovery to their shipmates, but none of them was able to solve the enigma as to the origin of these seemingly mysterious sounds which came to them across the water.

Months afterward, upon returning to Brazil, the crew determined to satisfy their curiosity. Accordingly they mentioned the circumstance to their friends and were informed that at the time when the sounds were heard the bells in the cathedral of San Salvador, on the coast, had been ringing to celebrate a feast held in honor of one of the saints.

Their sound, wonderful to relate, favored by a gentle, steady breeze, had traveled a distance of upward of 100 miles over the smooth water and had been brought to a focus by the sails at the particular locality in which the sweet sounds were first heard.

This is but one of several instances of a similar kind, trustworthy authorities claiming that this same music is often heard under somewhat the same circumstances and especially in a moisture laden atmosphere.—London Tit-Bits.

English Regard For Teaching.

If there is one occupation which Englishmen are unanimous in condemning as degraded and degrading it is that most fascinating, most difficult, delicate and important work, the training of the mind. In what are humorously called "the higher walks" of teaching there are respectable salaries to be earned and agreeable rooms or houses for occupation. Here, purged of the dross of utility, a man may once more take rank as a gentleman, and if he becomes head of a house the supreme uselessness of his position commands universal and silent respect.—Nineteenth Century.

Gentian Root.

Gentian root, often used as a tonic, is considered in many malarial countries a remedy against intermittent fever. Especially is this the case in Corsica, in that section of the island near the town of Aleria, which is infested with malaria. The inhabitants recently protested violently against the introduction of quinine on the part of the medical authorities, declaring that they would not abandon the remedy which had been used among them for centuries, the gentian root, either powdered or simply masticated.

Quite the Contrary.

"After all, my friend," began the solemn stranger, "life is but a dream, a"—

"Not much, it ain't," snorted the hard headed man. "In nearly every dream I ever had I was gettin' more money than I knowed what to do with."—Philadelphia Press.

Frenchmen and Spanish.

French people find it difficult to speak Spanish properly. Victor Hugo boasted that he was the only Frenchman who could really speak Spanish something of Spain being mingled in his ancestry.

But for some trouble and sorrow we should never know half the good there is about us.—Dickens.

THE HUMAN BRAIN.

It Undergoes Wonderful Changes During Its Growth.

The wonderful changes which the human brain undergoes from the moment when it first appears in the embryo until it becomes the perfected laboratory of thought characteristic to the matured human being has been commented upon by several of the leading writers on biology, physiology, etc. During these successive changes, or, rather, transformations from the lower to the higher sphere, the human brain not only takes upon itself the general shape and form of the brains of various representatives of the lower classes of animals, but appears to have the same structural constituents, at least to a certain degree. Thus it has been found that the original germ of the brain as it appears in the human embryo has the exact outlines of a serpent's thought factory. After that the changes which take place while the brain is assuming the various shapes which it must undergo before it becomes perfect give it a decided resemblance to the brains of fishes, birds and mammiferous animals.

"Hein's "Thoughts on the Structure of the Human Brain" and Wilson's "Anatomy of the Human Body" both mention these queer transformations, as does also Hugh Miller in his famous work, "Testimony of the Rocks." Miller puts it in this way: "It has long been known that the human brain is built up by a wonderful process, during which it assumes in succession the form of the brain of a serpent, a fish, a bird, and lastly, before it assumes the characteristic human form, it takes upon itself the outline of a mammiferous quadruped's brain." Hence the remark made by scientific writers that "man is the sum total of all animals."

POOR HANDWRITING.

One of the Causes That Downed Napoleon at Waterloo.

The nose of Cleopatra had a marked influence on the destinies of the ancient world. The handwriting of Napoleon I., we are assured by recent historians, had a similar effect upon the evolution of the modern world. He did not write; he scrawled. By reason of this, among other causes, he lost Waterloo. Grouchy could not read with exactness his decisive message. Was it "bataille engagee" (battle is on), or "bataille gagnee" (battle is won)?

Grouchy chose the latter significance and, not believing it necessary to press forward, arrived too late. So much for the curl of a letter, a pen stroke or an illegible swell to an "a."

This question was brought forward by the writing master of the elder Dumas.

"Remember, Alexandre," the master said to him, "the great defeat of the emperor was due only to his scrawling hand. If you wish to succeed in the world be careful of your heavy and your light strokes." So if Napoleon had known how to write legibly or if he had taken the trouble to do so his descendants would reign today in France and we should not have had the republic. It appears historically established today that Dumas' writing master was right. And on such slight things rests the fate of empires.—Cri de Paris.

The Osprey.

Allusion is often made, especially in fashion journals, to "osprey" feathers. Few words have been more loosely bandied about than this bird name. The Roman author Pliny's "ossifragu" (bone breaker) has been identified with the lammergeyer, a vulture that is reputed to break up bones too big for it to devour whole by dropping them from a height upon rocks. But both "ossifrage" and "osprey," a newer form, came to be applied to quite another bird, the fish hawk, which is now the true "osprey." Yet the "osprey" feathers—more properly egret feathers, or aigrettes—do not come from this bird, but from the egret, or lesser white heron.

The Sea Otter.

The sea otter combines the habits of a seal with the intelligence and amusing character of the otter. When met in herds far out at sea, which is but seldom now, they are commonly seen swimming on their backs. They even eat their food lying in this position on the water and nurse their young ones on their chests between their paws, exactly as a south sea island mother swims with her baby in the water. When swimming in this attitude they even shade their eyes with their paws when the sun dazzles them.

One of His Inferiors.

"He says he always tries to be polite to his inferiors and— Hey, where are you going?"

"Going to find him and give him a licking."

"What for?"

"I met him this morning, and he was as polite as a dancing master."—Houston Post.

The Other Way.

The teacher had been talking about a hen sitting on eggs, says English Country Life, and, with the incubator in mind, asked if eggs could be hatched in any other way.

"Yes, sir," said an experienced person of nine. "Put 'em under a duck."

The Remedy.

"You're not in love, Robbie. You only think you are."

"Well, how the dickens am I to find out my mistake if I am mistaken?"

"Oh, marry the woman by all means."—Home Notes.

A Distinction.

Mistress—Have you had any experience with children? Bridget—Nope, but they have had some wid me.
