"No Clutch on the Drill Shaft"

OF THE J. I. CASE PLANTER

On all Planters other than the J. I. CASE Power Drive the action of the plates is controlled by a clutch on the running drill shaft.

The clutch soon wears out and may fail to work when you need it most. Avoid this danger by buying a J. I. CASE Power Drive Planter where the parts performing the function of the drill shift clutch are found on the slow moving MAIN axle. They are made heavy and strong. Don't buy until you see this accurate and reliable planter.
