THE TRANSCRIPT

THE political situation in some of the Eastern Shore counties is getting active, many candidates having announced themselves. Things are drifting along quietly in this county. There are a number of would-like-to-be candidates, but so far they are remaining under cover, and wisely so.

THE gathering together of 223 men from Kent County, including about twenty guests from neighboring counties of the Shore, for the banquet of the Business Men's Association, represented one of the largest affairs of its kind ever held in Chestertown. When 200 men, from every part of Kent County, meet each other and have a good meal, and a good smoke, and hear a number of good addresses, there is no question but that the conditions are ideal for congeniality and friendliness, and 200 men from the same county cannot get together under these conditions but many will be benefited in some way. Mr. Goodwin's talk on the 1923 program for the Business Men's Association showed that it is a civic organization working for the welfare of Chestertown and Kent County, and deserves to be backed up by the people of these communities, so that it can carry out the good work. This can be done by becominga member of this association. All the addresses of the evening pointed to the better marketing of the farm produce.

Do You Know Why the Gear Shift is Different?

DODGE BROTHERS MOTOR CAR

When Dodge Brothers Motor Car first came into being, more than eight years ago, one of the first points which impressed observers was the new and special type of gear shift.

Although different radically from the other types it received instant popular indorsement and today has the approval of 850,000 owners.

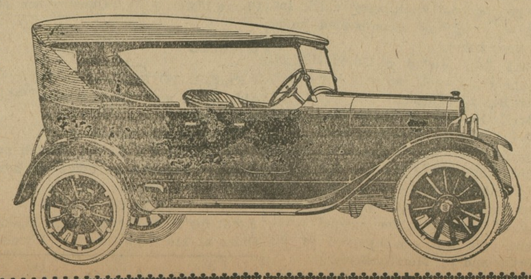

It is popular because it is logical. Its design is based on the natural inclination of the driver. To start you throw the lever forward. To reverse, you throw the lever backward. And owners also know that it is particularly convenient, when the car is running in high speed, to have the gear shift lever in a forward position, out of the way, where it does not interfere with passengers, robes or luggage.

The use of this unique gear shift requires a special type of transmission—a type developed, patented and used exclusively by Dodge Brothers.

This transmission is so designed that the countershaft—used in intermediate speeds and in reverse—is disconnected while the car is running in high gear. Power is transmitted directly to the rear axle. As over 90 per cent of all driving is done in high, this exclusive feature obviously eliminates a vast amount of wear, in addition to eliminating gear noises and minimizing the loss of power through friction.

From this it is evident that the owner benefits in economy and efficiency, as well as convenience, from the fact that the gear shift of Dodge Brothers Motor Car is logical.
