Are You An Up-To-Date 20th Century Farmer?

IF SO, YOU WILL USE

T. R. HUBBARD & SON'S

MODERN FERTILIZER BRANDS

MANY cannot understand why, after so many years doing business here, that T. R. Hubbard & Son's Fertilizers are more extensively used year after year. But the mystery is solved by a visit to our factory, which is always open for inspection to the public, and those who go down to our works marvel at the pains taken in manufacturing the goods.

"First, the bone is shoveled in the crusher with a scoop shovel and prepared for the Denmead mill, then it is dissolved, and after getting in good mechanical condition, if making dissolved bone goods, so many pounds of bone is put in the mixer. The nitrate of soda, fish and high grade potash are added, the whole thoroughly mixed, passed through a phosphate mill and screened and thrown up in bulk, to remain until it is shipped, and then it is bagged in new treated acid-proof bags, and sent out in splendid shape. We are often asked, "Why don't you run the goods when first mixed, right in the bags, and not go to the expense of treating the bags, as do other manufacturers?"

"We are often asked if this is not a needless extreme, but we reply—it pays to make the best.

Whilst there is some loss by evaporation by bulking, an additional expense in rebagging and an expense to treat the bags, when we remember that a farmer appreciates a good goods and in first-class mechanical condition, it pays to go to extremes, as it is impossible to make a first-class fertilizer otherwise; and by treating our customers right in their purchases, making the time of payment of the bill to suit them, we have gotten a personal hold upon our trade.

"Now, in order that we might continue to be an up-to-date concern, it was necessary to have our own acid chambers and an acid phosphate plant, so as to be entirely independent of the trust, and we have gone in with another concern and erected one of the most modernly equipped phosphate factories in the East, located at Canton. This will make our

Dissolved Phosphate

and supply the Chestertown factory, and instead of closing up our old factory, as many supposed, we will be in better shape than ever before, and will be worked harder than ever. We tell you all this, for when you know what we know about our business, you will not buy any ordinary fertilizer, but

T. R. HUBBARD & SON'S BONE FERTILIZERS

the Fertilizers that have made T. R. Hubbard & Son's Fertilizers famous. If, therefore, you are going to sow wheat this fall, and want a good goods and want to save money on your purchases, it will pay you to see us before placing your order. Respectfully,

Wilbur W. Hubbard,

FOR THE HOUSEWIFE

How to Make Fish Pie.

Melt an ounce of butter or clarified dripping in a saucepan and cook with it the same quantity of flour for a few minutes, stirring the mixture all the time so that it may not change color. Add half of a small onion, sliced, a sprig of parsley and a small slice of fat bacon, and let the ingredients fry for five minutes. Then pour in gradually rather more than half a pint of milk and stir until the sauce is smooth and thick. Season with salt, pepper and a little grated nutmeg, let simmer for fifteen minutes and pass through a gravy strainer. Butter a pie dish and place in it a layer of cooked fish, divided into flakes; cover it with sauce, then add more fish and more sauce alternately until the dish is nearly full. Spread some well boiled rice, which has been mixed with a little butter, a tablespoonful of tomato sauce and seasoned with salt and pepper, over the top of the pie. Then scatter the rice thickly with browned crumbs, place some little pieces of butter on them and bake the pie in a hot oven for about fifteen minutes.

About Dusters.

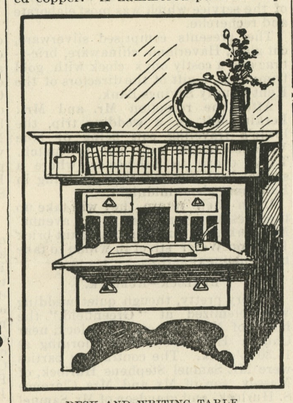

To keep a house in good order plenty of dusters are a necessity. They should be about three-quarters of a yard square and neatly hemmed. They are best made of some soft material. Old sheets make good dusters and are particularly useful for dusting white and delicate articles. Cotton, however, is better than linen, which is fluffy. Needless to say, dusters should be washed directly they are soiled and should never be allowed to get really dirty, or the furniture will look anything but bright and clean, says the Philadelphia Press.

Housemaids frequently flap the duster upon tables and chairs and so raise the dust, which in a short time settles in another part of the room. Dust should be taken up carefully and gently, while the duster should be frequently shaken out of the window.

Dusting brushes of feathers are useful for pictures, etc., and for corners out of reach in the ordinary way.

Neat and Convenient.

The desk here portrayed is an original design in oak, in the forest green shade so much admired at present, and the mounts and handles are of burnished copper. A hammered panel of copper inserted in the front of the flap imparts an extra touch of embellishment. The drawers and pigeonholes are sufficient for ordinary demands, and the little shelf on top makes a convenient resting place for books of reference, time tables, etc.

DESK AND WRITING TABLE.

Peaches.

There is hardly a fruit, unless apples be excepted, that shows such a tendency to variation as the peach. Peaches differ in size, color and flavor, and the kind that preserves well often will not do for pies, shortcakes, etc. The housekeeper should make herself familiar with the differences between clingstones and clearstones, or freestones, as they are called in some localities, and should know the properties of the pink, yellow and white fleshed fruit. Clingstones have ordinarily the richest flavor and are nice for slicing. The pink fleshed varieties are best for all cooking purposes, and the firm fleshed yellow fruit makes the most satisfactory preserves.

Whitewash For Cellar.

A whitewash that is good for cellar walls and will not rub off is made by taking a half pailful of lime mixed with water ready to put on the wall, then mix a quarter of a pint of flour with a little cold water, pour on it enough boiling water to thicken it, and add it while hot to the lime. Stir well, and it is ready to use. Whitewash for outside use may be made by slaking half a bushel of lime in a barrel; add a pound of common salt, half a pound of sulphate of zinc and a gallon of sweet milk.

Best Way to Beat Carpet.

Perhaps the most thorough way to clean a carpet, especially a brussels, is to lay it on a clean grass plot, face down, and beat it as it lies there. After being beaten thoroughly it can be dragged by the corners over the grass, which will brush off all adhering dust, and the carpet will be cleaned in the most approved manner. To beat a carpet on a line is but an imperfect way, and the work is not as well done unless by the most patient beating.

Labels For Preserve Jars.

A bright housekeeper has discovered a new system of labeling jelly and preserve glasses. She buys a roll of white passepartout binding for about 8 cents. This is well gummed on one side, and she uses as long or as short a piece as the label calls for. The pasting process is much more quickly gone through with than when separate labels are used.

Ten Thousand Churches

In the United States have used the Longman & Martinez Pure Paints.

Every Church will be given a liberal quantity whenever they paint.

Don't pay $1.50 a gallon for Linseed oil (worth 60 cents) which you do when you buy thin paint in a can with a paint label on it.

8 & 6 makes 14, therefore when you want fourteen gallons of paint, buy only eight gallons of L. & M., and mix six gallons of pure linseed oil with it.

You need only four gallons of L. & M. Paint, and three gallons of Oil mixed therewith to paint a good sized house

Houses painted with these paints never grow shabby, even after 18 years.

These celebrated paints are sold by

F. H. HARPER & SON, Still Pond
