Boys' Overcoats at this price are wonderful Bargains. Any man would pay $10.00 for an Overcoat to fit him of these same goods if he could only get one. The prices are double elsewhere. $2.98

$4.00 Ladies Skirts, only . . . $1.90
$3.50 Ladies' Beautiful Hats, . $1.90

REMEMBER in any event if goods are advertised elsewhere its always CHEAPER at THE HUB

HISTORY OF FRANCIS LYNCH'S CORN CROP

How He Selected The Seed, Worked The Ground, Etc, That Won Him Honor—Seed From Kent.

The following history of the corn crop of Francis Lynch, first prize winner in the recent Caroline county contest, will be of interest to hundreds of boys and others throughout the county:

In the early part of the present year on learning that there was to be a prize offered to the boy who would grow the most corn on one acre of ground, I began to look around to select a piece of ground which would grow as many bushels of corn as was possible to be grown, provided I gave it the best care and used the most intelligent methods of fertilizing, planting and cultivating which I knew.

On "Oaklawn Farm" where I live and grew my acre of corn, the rotation, as far back as I can remember, has been a three-year rotation of corn, wheat and clover. The plat I selected has a soil of heavy brown loam, with a reddish clay sub-soil. It was a clover sod having been used as a pasture field last year. In January I hitched on to the manure spreader and spread sixty-six bushel loads of stable manure on this acre. By the last of April on account of the manure spreader having torn the manure up so finely and distributed it so evenly the winter rains had carried it all down in the soil so that you could scarcely see any of it left on top of the soil When ready to plow the land I again hitched to the spreader and spread three more sixty-bushel loads of manure on this acre, making nine loads in all. Then the disc harrow was brought into use, which thoroughly disced up the sod. Immediately after, and on the same day, which was May second, I plowed it, using three mules and a forty Oliver plow—plowing eight inches deep. After plowing I rolled it at once. Then I took a disc drill and sewed 500 pounds of Kanitt on it, following the drill with a smoothing harrow. Now the ground is ready to plant

Now as to the variety of corn: I had the seed all ready; it is a white dent corn that my father got in Kent county, Md., about eight years ago, and is known as the "Pride of Kent" I picked out 30 ears—selected them the best I knew how—from two barrels of corn that my father had selected in the field for seed in the fall of 1910. I numbered these ears from one to thirty; then I took my pocket knife and pried out five grains from the middle of each ear and planted them in a carefully prepared plat in the garden as it was warm enough by this time to plant out of doors. Twenty-three ears out of the thirty every grain grew two of the ears only, four out of the five grains sprouted; the other five samples sprouted 2 or 3 grains each. I then took the 23 ears that showed up best and after shelling off a few grains on the tip end only, I shelled the balance of the ears for seed and was then ready to plant.

On May 11th the corn was planted in rows three feet and two inches apart with a two-row corn planter, set to drop one grain every nine inches in the row, the planter covering the corn about three inches deep. On May 20th the corn was harrowed by using a 14 tooth Planet Junior cultivator. This was the only cultivator used because it left the ground almost perfectly level, and in such a shape that it held the moisture better than the 5-tooth cultivator, commonly used. This was done once every week until july 8th, when it was cultivated for the last time; each time setting the cultivator to run a little more shallow. By August 10the corn had about reached the roasting ear stage. By September 15th the corn was ready to cut, the ripening stage having been hastened by the exceptionally dry weather. The amount of rainfall at "Oaklawn Farm" from May 1st until September 1st being less than 4 inches. This average height of stalks was about 11 feet. The size of the plat was 43,560 square feet. Number of bushels of corn grown on this plat was 116½ bushels. It was measured in a bushel basket, two baskets being called one bushel. Although a number of baskets were weighed as they were hauled to the crib, and found to weigh more than what is commonly called a bushel of corn by weight.

The cost of growing this acre of corn was follows: Discing sod 75c; plowing land $1; preparing seed bed 50c; farm manures $18 00; commercial fertilizers $2 75; planting 20c; seed 30c; cultivating $1.75; harvesting corn $4 62; rent of land $7.00. Total $36.87.

The only difficulties met with were the black birds, which pulled out a small amount just as the plants were coming through the ground. The weather of course was the most serious problem of all. But I believe if the ground had been plowed a month earlier and worked over every week until planting time, the crop would have withstood the drouth better and consequently made more corn.—Caroline Sun.

FARMERS' CLUB

The Still Pond Farmers Club met at the home of Mr. W. H. Bonwill. Quite a number were present and very interesting meetings were held by the ladies and men too. The ladies discussed poultry, whether it was advisable to sell poultry before Thanksgiving, a cure for roup and curing of meat; also other interesting subjects. In the afternoon meeting consolidated schools and the farmers condition was far superior to what it was thirty years ago, were discussed. After a great deal of discussion, in which Rev. Sewell Hepbron, Mr. James S. Harris, Mr. Tilghman Shafer and others took part, it was decided that they were a greal better off. Mr. James S. Harris was appointed as a delegate, with Mr. Shafer as alternate, to attend the Horticultural meeting in Baltimore the first week in December. Mrs. Robinson entertained the club very much with her fine singing. The club then adjourned to meet at the home of Mr. Harry Redding the last Thursday in December. Those present were:

Mr. and Mrs.—
James S. Harris,
Edw. B. Pennington.
Daniel Hill,
Joshua Jarrell,
Fred. Cornelius,
Samuel Roseberry,
John Bennett,
Robert R Hill,
Mesdames—
Lula Pennington,
Lavinia Harper,
Kate Crew,
Charles Walters,
Misses—
Jessie Crew,
Messrs.—
Carson Harris,
William Medders,
Harry Redding,
Leonard Price
Tilghman Shafer,
Arthur Harris,
Rev. Sewell Hepbron,
Rev. J. D. Beauchamp.
Biddle Hossinger,
Eugene Bonwill,
Mrs. Robinson,
Mrs. Bond,
Emma Shafer,
Harris Crew.

Children Cry
FOR FLETCHER'S
CASTORIA

CASTORIA

for Infants and Children.

Castoria is a harmless substitute for Castor Oil, Paregoric, Drops and Soothing Syrups. It is Pleasant. It contains neither Opium, Morphine nor other Narcotic substance. It destroys Worms and allays Feverishness. It cures Diarrhœa and Wind Colic. It relieves Teething Troubles and cures Constipation. It regulates the Stomach and Bowels, giving healthy and natural sleep. The Children's Panacea—The Mother's Friend.

SHIP YOUR TURKEYS TO
THE RELIABLE POULTRY HOUSE OF
FRANK HELLERICK & COMPANY
120 Callowhill Street : : : 349 New Market Street
PHILADELPHIA, PA

We solicit shipments direct from farmers, as we find we get our finest poultry from them. The best buyers of our city know that we handle fancy Maryland poultry direct from the farm, and therefore come to us for their supply. We had a nice business from Kent and Queen Anne's counties last year, but having moved into one of the finest locations and having the largest store space in our city we want much heavier shipments. Remember our motto—"Best goods for our buyers, top prices for our shippers, and a square deal to all." Write us today what you have and we will keep you posted.

The J. E. Baker Co. Now Offers For Sale
Victor Fine Ground Limestone

THE BEST WAY TO LIME: The United States Government and the Pennsylvania Agricultural Experimental Stations are now recommending Finely Ground Limestone as the best way of applying Lime to the soil. It does not destroy manure, there is no danger of burning your crops, it keeps for years, and can be applied at any time or season.

EASIEST AND CHEAPEST TO USE Comes packed in canvas or paper bags. Can be easily handled, and kept in storage indefinitely, without change or loss. No more laborious slacking, no more choking dust, nor scalding burns. Can be drilled into the soil, or sowed on the surface and harrowed in. Saves half the cost of the old way of applying Lime. Is cheaper and better.

GIVES MAXIMUM RESULTS It has been proved that very Finely Ground Limestone produces, as a fertilizer, the same results pound for pound as air-slaked Lime, or any other commercial fertilizer, and because VICTOR Fine Ground Limestone is the purest, most Finely Ground Limestone on the market, and because it destroys no manure or crop, it gives much better results than any other burned or hydrated Lime made.

See your local agent or write.
