NOT...
...the space of a...
...the newly discovered...
...containing not only those that have been made and...
...in Europe, but a Number of new ones lately made in...
...delphia; by which several of the principal Properties of...
...wonderful Fire are demonstrated; viz.

That it is a real Element, intimately united with all other
Matter, from whence it is collected by the Tube, or Spout,
and not created by the Friction.

That tho' it will fire inflammable Bodies, itself has no in-
fible Heat.

That it doth not, like common Matter, take up any per-
ceptible Time in passing thro' great Portions of Space.

That Bodies replete with this Fire strongly attract such as
have less of it, and repel such as have an equal Quantity.

That it will live in Water, a River not being sufficient to
quench the smallest Spark of it.

That contrary to other Matter, it is more strongly attracted
by slender sharp Points, than by solid blunt Bodies.

Among other curious Particulars, will be shewn, a Represen-
tation of the Sensitive Plant.

A small Globe revolving round a larger, as the Earth does
round the Sun.

A Representation of the seven Planets, shewing a probable
Cause of their keeping at a Distance.

An artificial Spider, animated by Electrical Fire, acting like
a live one, and endeavouring to catch a Fly.

A Leaf of the most weighty of Metals, suspended in the Air,
as is said of Mahomet's Tomb.

A Perpetual shower of Sand, which rises again as fast as it
falls.

Various Representations of LIGHTNING, the Cause and
Effects of which will be explained by a more probable Hypo-
thesis than has hitherto appeared; and some useful Instructions
given how to avoid the Danger of it.

The Force of the Electrical Spark, making a fair hole thro'
a Quire of Paper.

Small Animals killed by it instantaneously.

Spirits kindled by Fire darting from a Lady's Eyes (which is
a Metaphor).

Spirits of Wine also kindled by a Spark after it has passed
thro' ten Foot of Water. Also by Fire issuing out of a cold
Egg.

An extinguished Candle lighted again by a Flame issuing out
of cold Iron.

An Electrical Mine Sprung.

The amazing Force and Swiftness of the Electrical Fire in
passing thro' a Number of Bodies at the same Instant.

A Piece of Money drawn out of a Persons Mouth in spite
of his Teeth, yet without touching it; or offering him the least
Violence.

The Salute repul'd by the Ladies Fire.

Eight musical Bells rung by an electrified Phial. Also an
electrified Picture.

A Battery of eleven Guns discharged by Fire issuing out of a
Mans Finger.

In order that different Companies may not interfere with
and incommode each other, Tickets will be given out for
each Exhibition, expressing the Time, &c.

The Price of a Ticket, to admit a Gentleman and
Lady, Seven Shillings and six pence; a single Person
Shillings. The first Exhibition will be on Monday the
Instant if the Weather be fair, and Tickets will be sold at
the Dwelling House of Mr. John Leitch, in Philadelphia.

Any Gentlemen proposing a new Experiment may have it
try'd at a vacant Time; and the Reasons, as far as known,
of every Operation, will be given at Leisure to curious
Enquirers, by

Their humble Servants,
