

is the Baltimore, Ohio, Railroad - This
Road, running from this City to Wheeling,
is 379 Miles long, not including the
Washington, and North West Virginia, Branch.
In judicious economy of management,
and comparative freedom from accidents,
it can favorably compare with any
Road in the Country - Several new
lines that are to be built by, and in
connection with, it cannot fail to add
to its business - A line from Point of
Rocks on the "Main Stem" to Washington
will shorten the distance between the
Capital and the West, forty six Miles.
The Company is also preparing, in
conjunction with other parties, to build
a line from Cumberland to Conowingo
in Pennsylvania, by which means their
Road will be brought into direct
communication with Pittsburgh,
and that important City would be
brought seventy two Miles nearer to
Washington - In connection with
these two proposed new lines it is
understood that measures will
be promptly taken to complete a
Railroad from Cleveland, via Youngstown,
to Pittsburgh, by which the Northwest
will be brought eighty four Miles nearer
the Capital than by any other existing
lines -

6
depth, to render its working a profitable
business -
