

There are also found one or two separate mineral
tuffs. The bones & metals were packed one
from the furnace open in paper. The others
were left. I gave directions that all parts
of the contents of the furnace should be packed
into the hands of the Chemist & Medical Men as
they thought proper.

None of the Medical Men were
there on February. At least there are five.
I don't know what portion was Dr. Dr. Dr. Dr. Dr.
I went to Cambridge for them.

I took the charge of the contents of the
rooms except the bones & remaining.

The remains were a pretty sight put into
the Privy.

It was 9 or 10 o'clock February that I took
over the contents of the furnace.

I don't know what officers were left in
charge of the College on Saturday.

I can't say what the bones found in the
furnace were.

The Medical Men were there in
the afternoon of February. Can't say as to the
forenoon. Have written that Dr. Dr. Dr. Dr. Dr.
there in the forenoon.
