

If I had not been with the Dr R was saying  
I should not have supposed that there remains  
was his body.

There were no marks about the body  
which were at all peculiar.

The height could be got at in the way we  
proceed within of an inch. - there is of a  
living body from the remains -

As to the opening between the 6<sup>th</sup> & 7<sup>th</sup> ribs. I  
could not say that that was produced by a stab.  
<sup>hole in</sup>  
<sup>side.</sup> The points ~~were~~ these affected by substances  
offered made the skin soft or pliable -  
could not say if made by a open  
death - a persons finger might easily  
have gone through there in taking of the  
part of the body

We discovered no mark on the ribs  
by which thrust of knife could be discerned  
We looked for this with worn bone.

As much as two gallons of blood in  
the body of the size indicated by the remains.

about two gallons of blood in a subject  
of this size would be expected to be found  
after death.
