

Dr. George A. Gey. I was one of the Doctors
who made the Nephre with Division of arms
— the separation of the different parts of the
body, particularly the skeleton, showing their
Anatomical knowledge.

The head was separated from the body &
thence by sawing. It is not an easy piece
by dissection. Anatomists never are a fan of
the person. — Difficultly in separating the
thigh from the hip by one having no anatomical
knowledge — could not do it without Lachry.
— willing to designate such kind of knowledge
or to show that the person who did it was deficient
in anatomical knowledge.

When I arrived Saturday afternoon
the police officer were scraping off the skin
with a cane. I saw him peel the body
& saw the disfigurement when he took his cane
away.

I saw no irregularity in the ribs
or the pericardium. Monday was the last
time I saw the remains. We made our
examination on Sunday.

We found only one perforation in the
body through the 6th & 7th ribs.

We examined that perforation and
interior.
