

relation of the upper & lower jaw, - The
two plates were fitted to the two jaws
with wax on each, & closed air space, & a
several distance; then both were taken out

The readings of the upper from the
lower jaw are very thoroughly - checks
in the P. other people have the bases.

At length I got exact contour
of the denture - & the procedure to
make the teeth - They were made in
blocks. - The great irregularity of the
lower jaw & great care to make the fit
- upon ~~preparing~~ the shape of the teeth
they are satisfied, & then fitted.

The great irregularity of the lower jaw
occurred much difficulty in fitting -

Below teeth of the P. were used
from two in 3 blocks for the upper jaw -
& the lower in 3 blocks - and not
made of a whole block as for the upper
in consequence of the irregular teeth
which remained. The work

peculiar of all the blocks was on the
left side of the lower jaw. There was
the largest of the blocks, the best largest
was on the opposite side of the lower jaw.
The lower set was completed by two or 3
teeth in front. These the lower
