

Iron Mine Station

There are doors in the partition behind the lecture table of the lecture room, behind the furnace & funnel - made for ventilation - through there a person could enter the back room - they are not down to the floor - & on the left of the door opening into the back room -

At XX is also a large funnel or door that can be raised & lowered, opening over the sink & into the small private room from the lecture room -

Thus there are 2 more entrances, & there have no locks.
