

In the blood man's - or woman's -
beats - Can distinguish by Barrelet's
test of Sulphuric acid - when beaten
with it - it gives out an odor that is
characteristic - I showed in my lecture

I used to go out & work in the garden in
slippers & old pants' I sent them in
to Med. Col. to use them in dirty work -
Cut finger - John Wiley & Sarah know -
& the girls

Judge M. allude to the penny papers & their
little stories & falsehoods

I was always in a hurry

Miss W. asked me every day if I had
got her Citric Acid - an instance of my
forgetfulness of everything but my lectures
& so was leaving the Göttinger not taken to
be mended
