

10th Is the fault a Man to be agitated and weep,
especially at the sight of dismantled limbs, and that too,
without knowing where limbs they were? Would he not be
likely to resort to various arts to ~~prevent~~ keep down all
suspicion of himself in the mind of his wife? Or has he been
up to the point under the eyes of Webster's laboratory?

11th It is so important to clear up the matter as to the ~~blame~~
which has been ~~given~~ by Prof. Webster, that I shall take the
liberty of ~~giving~~ ~~some~~ ~~adverse~~ ~~critical~~ ~~suggestion~~
in connection with the ~~fact~~ ~~of~~ ~~his~~ ~~action~~. I think I am sure that
if the ~~fact~~ ~~was~~ ~~admitted~~ ~~by~~ ~~W.~~ ~~for~~ ~~his~~ ~~action~~. Admit that to be true,
if an objection can be shown, does, but would be wanted for that
purpose if he were ~~acting~~ ~~on~~ ~~that~~ ~~flimsy~~, or on ~~another~~ ~~and~~,
or on ~~respiration~~, or on ~~any~~ ~~other~~ ~~of~~ ~~the~~ ~~materials~~
of ~~nitrogen~~. On looking at Webster's Manual of Chemistry,
I find that he would be ~~engaged~~ ~~on~~ ~~the~~ ~~subject~~ ~~of~~ ~~Carbon~~ ~~and~~ ~~Hydrogen~~
gases towards the latter part of November, or when nearly
through one fourth part of his course of lectures. He, therefore,
by following his own manual as a model, would have wanted
then about that time, I would have regarded at least a
just for the ~~fibrous~~. And now I have a ~~great~~ ~~many~~
critical suggestions to make, as ~~admirable~~ ~~proof~~ ~~of~~ ~~great~~ ~~and~~
~~performance~~. In my judgment, I think I am sure, as to
the matter which ~~is~~ ~~mentioned~~ ~~for~~ ~~Prof.~~ ~~W.~~ ~~a~~ ~~little~~ ~~before~~
the ~~supposed~~ ~~meeting~~, and probably also as to the ~~salt~~
having been an ~~inadvertent~~. What then was that the nature
of that ~~matter~~? I believe it to have been a preparation
for obtaining the protoxide of nitrogen to show the class
its effect upon blood in coloring it red. The blood, therefore,
was wanted partly for that purpose. And, now, as to the
nature of the ~~salt~~. That was, the nitrate of ammonium, ~~from~~
which the protoxide of nitrogen was to be obtained. It has
appearance is exactly like that of ~~common~~ ~~salt~~, and is the
