

Seam

20 lbs Cotton twine, 10 thread-will Nit $3\frac{1}{4}$ Rods
of Seam 100 Maches Deefe and the Maches one $\frac{1}{4}$ wane
inch after being string. In stringing the
Seam it wants to be taken up $\frac{1}{4}$ So that
the Maches will hang square. I have
put the Corks & Leads 30 inches apart. I tared
my Seam before stringing it, it's dried in well
and I think it will last longer. I put 1 gale
of tar to 3 galls of fresh water and Boiled it
warm, so the tar was thin, then dipped my
Seam in to it and wrong the Seam and Draw
it through our Gandy so that we got on an
even Coat. My Seam is $6\frac{1}{2}$ Rods long
after being string.

How to make good pathy for Boats
and will Dry, hard, keep, follow, Lime
and Oil mixed as hard as pathy for use

On our passage out from Home 2 Deerces
and one Chit of Molasses leaked out. I
must write to my owner about it.

How to make a Whale Anchor out of Iron
hoopes, weighing from 115 to 120 lbs and made
out of 2 bundles of large size Iron Hoopes
in the first place take 7 lengths of Hoops
twice as long as you want the Shank and
Crown of the anchor and bend them Double,
form the eye for the ring then a hole for the
stock, then Ribbet the 14 parts of the Hoops to
gether close by the Stock, then fill up the
middle with Iron Hoops by filling each one one
inch & a half towards the Crown, then put on the
sack screws and crew the Hoops tight to gether
then Drive on Hoops Bands, then form the flukes
and cut the in side Hoops one inch shorter then

its out side Neighbor till you come to the last
or middle Hoops, then lay on Short Hoops have
ing them one inch longer and longer till you
form the Crown, having 3 long Hoops on
the out side and 3 on the in side to Ribbet
at the end so as to hold the Short Hoops.
crew them well to gether, then Drive
on the Bands which will hold the flukes
to gether, fill up the hole in the Crown with
wood before Driving on the Bands, so as to con-
fine the wood, I have made 2 anchors for
the Montezuma in this way
