The sky's the limit at United

The air transportation industry is an exciting career field characterized by tremendious growth and phehomenal technological advances. At United Air Lines, qualified and capable college graduates have outstanding opportunities to make very real contributions.

Since its beginnings in 1926, United has been a pacesetter in the industry, and today we employ more than 40,000 people with growth plans in the next few years calling for total employment of 50,000.

Our sophisticated systems demand equally sophisticated professional men and women . . . individuals who can help us grow while advancing themselves.

You'll find United a highly rewarding place to work, both financially and professionally. Salaries are excellent. Employment involves a solid benefit program, including free and reduced-cost travel privileges and an employee stock purchase plan. And the nature and scope of the work is unbelievably challenging.

Review our current requirements described here and let us hear from you. I tcould be the beginning of something big.

AERONAUTICAL ENGINEERS,
ELECTRICAL ENGINEERS
ELECTRONIC ENGINEERS
MECHANICAL ENGINEERS

You'll work within one of the many specialized groups at United which concentrate on structures and control, radio and navigation equipment, engines, hydraulic systems, ground equipment, pneumatic systems, and the like. The work will involve developing and establishing basic standards, specifications and procedures relevant to installation, operation maintenance, overhaul, servicing, inspection and testing of aircraft and allied equipment.

INDUSTRIAL ENGINEERS

Organization and planning is a critical task area, and you will be intimately involved in job analysis, job evaluations, plus short and long range organization studies. Centralized editing and distribution of company regulations and procedures, forms analysis, design and control are all part of the assignment. Emphasis is on a creative approach to problem solving utilizing such advanced tools and techniques as work sampling, simulation, linear programming, etc.

SYSTEMS ANALYSTS

United's computer installation is one of the largest in the world. Our three UIVAC 1108 processors share a common 196K, 36 bit work core and 40 drums provide random access storage of nearly two billion characters of data. You will use this hardware support to develop management information systems in reservations, flight operations, equipment handling, flight planning, and many other vital areas. Responsibility including analysis through coding, debugging and documentation. Two to five years experience in business or scientific applications is required; college degree preferred.

PROGRAMMERS

As a programmer in United's Information Services Division, you will have an opportunity to develop programs for highly sophisticated equipment and see the job through from establishing internal controls to thorough and systematic program tests. As you progress, your responsibilities broaden to include opportunities in instructing other personnel, preparing procedure manuals, and poviding technical assistance and direction in console operations. One-to two years programming experience is required.

Opportunities now exist with United Air Lines' operations in Chicago and the San Francisco area. To obtain further career information, send your resume to:
